## AP Statistics Summer Assignment

The following assignment should be done over the summer. Some material may seem like a review, while other aspects may be new. DO NOT LEAVE THIS UNTIL THE WEEK BEFORE SCHOOL! It will take too long!

## THIS ASSIGNMENT IS DUE THE FIRST DAY OF SCHOOL!

## Part 1: The Joy of Stats with Professor Hans Rosling

The creator of the following video, Professor Hans Rosling, states on the site: "Gapminder is a non-profit foundation based in Stockholm. Our goal is to replace devastating myths with a fact-based worldview. Our method is to make data easy to understand..." Rosling uses innovative methods to present and display data and statistics.

Your assignment is to watch the video and answer the questions below.
(Feel free to watch more of the videos, most are short and interesting.)
Go to the website http://www.gapminder.org/videos/ and watch the video The Joy of Stats.

1) What was the mean number of correct answers given by Swedish students to the questions:
'Which country has the highest child mortality rate?'
2) In displaying data on global health, what does the size of a country's bubble indicate?
3) What are two benefits of public statistics?
4) The word 'statistics' is derived from what word?
5) The first systematic collection of statistics is what document?
6) Along with average, when reporting data, what other value is important?
7) Which distribution models the number of buses that appear in a given hour?
8) Who used a polar area graph to display data?
9) What analytical method explores meaning and relationships within data?
10) What is a zettabyte?
11) Other than the internet, identify 3 technologies used to gather massive amounts of data.
12) How many bananas were eaten worldwide in the time it took to watch the video?

These terms are used throughout the year, and by learning these definitions over the summer, we will have more time in class to cover all the necessary material before the AP exam.

Define the following terms (see below for the website). When asked, provide a sketch or UNIQUE example for the word (it should not be the one from the website). Take your time to complete this assignment, as many of these words may be a review of concepts you've learned in previous math courses and you will need to know them!
a) Go to www.stattrek.com
b) Click on "AP Statistics" and then "AP Tutorial"
c) The left side of the screen lists out general topics. Under each general topic are subtopics. You will use the "Exploring Data" general topic, and "The basics" and "Charts and graphs" subtopics.
d) Read through the descriptions for each term. There is an optional video to watch as well for each topic.

| DEFINITON | EXAMPLE/FORMULA/SKETCH |
| :--- | :--- |
| Categorical variables (qualitative variables) |  |
| Quantitative variables |  |
| Discrete variables |  |
| Continuous variables |  |
|  |  |

| Bivariate data |  |
| :--- | :--- |
| Population |  |
| Sample |  |
| Statistic |  |
| Median |  |
|  |  |

| Range |  |
| :--- | :--- |
| Z-score (standard score) |  |
| Center |  |
| Spread |  |
| Sariance |  |
|  |  |

| Bimodal distribution |  |
| :--- | :--- |
| Skewedness/Skewed Distribution | Skew left: |
| Uniform Distribution |  |
| Baps in a distribution right: |  |
| Difference between bar chart and histogram |  |
|  |  |

| Stemplot |  |
| :--- | :--- |
| Boxplot |  |
| Quartiles |  |
| Interquartile range |  |
| Four ways to describe data sets |  |

## Part 3: Practice Problems

Determine if the variables listed below are quantitative or categorical.

1. Time it takes to get to school
2. Number of people under 18 living in a household
3. Hair color
4. Temperature of a cup of coffee
5. Teacher salaries
6. Gender
7. Smoking
8. Height
9. Amount of oil spilled
10. Age of Oscar winners
11. Type of depression medication
12. Jellybean flavors
13. Country of origin
14. Type of meat
15. Number of shoes owned

A statistic is a number calculated from data. Quantitative data has many different statistics that can be calculated. Determine the following statistics from the data below on the number of homeruns Derek Jeter hit in each season of his career, from 1995-2014.

| 0 | 10 | 10 | 19 | 24 |
| :--- | :--- | :--- | :--- | :--- |
| 15 | 21 | 18 | 10 | 23 |
| 19 | 14 | 12 | 11 | 18 |
| 10 | 6 | 15 | 1 | 4 |

16. Mean
17. Minimum
18. Maximum
19. Median
20. $Q_{1}$
21. $Q_{3}$
22. Range
23. $I Q R$
24. Draw a boxplot of the data.

$0 \quad 12234506781010111213141516171819202122232425262728293031$
25. A local town recorded high temperatures for 50 days. Here are the data (rounded to the nearest whole degree), arranged in increasing order:

| 3 | 9 | 9 | 11 | 13 | 14 | 15 | 16 | 17 | 17 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 18 | 18 | 19 | 20 | 20 | 20 | 21 | 22 | 23 | 24 |
| 25 | 25 | 26 | 26 | 28 | 28 | 28 | 28 | 32 | 35 |
| 36 | 39 | 39 | 41 | 43 | 44 | 45 | 45 | 47 | 49 |
| 50 | 53 | 55 | 59 | 61 | 70 | 83 | 86 | 86 | 93 |

Make a stemplot using the "tens" as the stem and "ones" place as the leaves. Make sure you include appropriate labels, title, and key.

| Stem | Leaf |
| :--- | :--- |
|  |  |
|  |  |
|  |  |

26. The data in the table shows the number of major hurricanes each year from 1944 through 2000 as reported by Science Magazine.

| 3 | 2 | 1 | 4 | 3 | 7 | 2 | 3 | 3 | 2 | 5 | 2 | 2 | 4 | 2 | 2 | 6 | 0 | 2 | 5 | 1 | 3 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 | 2 | 2 | 2 | 3 | 1 | 1 | 1 | 3 | 0 | 1 | 3 | 2 | 1 | 2 | 1 |
| 1 | 0 | 5 | 6 | 1 | 3 | 5 | 3 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Make a dotplot to display these data. Include appropriate any labels, title, and scale. Use x's or dots for each data point.

Histograms are a way to display groups of quantitative data into "bars." They must have the same width and scale and are touching because the number line is continuous. To make a histogram, first decide on an appropriate bar width and count how many observations are in each. There is a chart started below.
27. The table below gives the percentages of residents aged 65 or older in each of the 50 states.

| State | Percent | State | Percent | State | Percent |
| :--- | :---: | :--- | :---: | :--- | :---: |
| Alabama | 13.1 | Louisiana | 11.5 | Ohio | 13.4 |
| Alaska | 5.5 | Maine | 14.1 | Oklahoma | 13.4 |
| Arizona | 13.2 | Maryland | 11.5 | Oregon | 13.2 |
| Arkansas | 14.3 | Massachusetts | 14.0 | Pennsylvania | 15.9 |
| California | 11.1 | Michigan | 12.5 | Rhode Island | 15.6 |
| Colorado | 10.1 | Minnesota | 12.3 | South Carolina | 12.2 |
| Connecticut | 14.3 | Mississippi | 12.2 | South Dakota | 14.3 |
| Delaware | 13.0 | Missouri | 13.7 | Tennessee | 12.5 |
| Florida | 18.3 | Montana | 13.3 | Texas | 10.1 |
| Georgia | 9.9 | Nebraska | 13.8 | Utah | 8.8 |
| Hawaii | 13.3 | Nevada | 11.5 | Vermont | 12.3 |
| Idaho | 11.3 | New Hampshire | 12.0 | Virginia | 11.3 |
| Illinois | 12.4 | New Jersey | 13.6 | Washington | 11.5 |
| Indiana | 12.5 | New Mexico | 11.4 | West Virginia | 15.2 |
| Iowa | 15.1 | New York | 13.3 | Wisconsin | 13.2 |
| Kansas | 13.5 | North Carolina | 12.5 | Wyoming | 11.5 |
| Kentucky | 12.5 | North Dakota | 14.4 |  |  |

Complete the frequency chart, then construct a histogram to display these data.

| Bar Width | Frequency |
| :---: | :--- |
| $5 \leq x<6$ | 1 |
| $6 \leq x<7$ | 0 |
| $7 \leq x<8$ | 0 |
| $8 \leq x<9$ | 1 |
| $9 \leq x<10$ | 1 |
|  |  |

## Algebra Practice

This is a formula that is used often in AP Statistics, where $z$ is what is known as the $z$-score, but we get to that later in the year.

$$
z=\frac{x-\mu}{\sigma}
$$

28. If $z=2.5, x=102$, and $\mu=100$, find $\sigma$. Show work.
29. If $z=-3.35, x=60$, and $\sigma=4$, find $\mu$. Show work.
30. If $\mu=7, x=10$, and $\sigma=0.6$, find $z$. Show work.

It is expected that you have an understanding of linear functions.
31. The USDA reported in 1990 that each person in the US consumed an average of 133 pounds of natural sweeteners. They also claim that this amount has decreased by about 0.6 pounds each year.
a) Write a linear equation that relates years since 1990 to the average consumption of natural sweeteners. Define your variables.
b) What is the slope and what is the $y$-intercept?
c) Predict the average consumption of sweeteners per person for the year 2025.
